AMERICAN CITIZEN PARTICIPATION STUDY, 1990 (ICPSR 6635)

SUMMARY: This study was designed to examine political and nonpolitical civic participation in the United States. Respondents were asked to comment on various topics, including their interest in politics and their party identification, voting status, and activity in community politics. In addition, respondents were asked about their campaign activities, including the kind of work they had done, and how much money and time they had contributed to

campaigns for various elections. Respondents also provided information about their own personal experiences with government programs, as well as their opinions on national and social problems in United States and why people in the United States aren't more active in politics. Demographic variables measured in this study include respondent's educational background, occupation, church activity and religious affiliation, race and ethnicity, age, gender, and union membership.

UNIVERSE: Adults 18 years and older in the United States.

SAMPLING: Clustered and stratified probability sample.

EXTENT OF COLLECTION: 1 data file + machine-readable documentation (text) + SAS data definition statements + SPSS data definition statements + data collection instrument + machine-readable frequencies

Introduction to the Codebook

This is the initial release of the follow-up survey for the American Citizen Participation Study. The American citizen participation study was designed by Sidney Verba, Kay Schlozman, Henry Brady, and Norman Nie. It began with a telephone screener study of a representative sample of over 15,000 adult Americans conducted by the Public Opinion Laboratory of Northern Illinois University and the National Opinion Research Center (NORC) during the last six months of 1989. These screener interviews, which were between 15 and 20 minutes in length and were conducted in both English and Spanish, provided a profile of political and nonpolitical activity, as well as basic demographic information. This initial sample was then stratified by race and ethnicity and by level and type of political participation, and Blacks, Latinos, and political activists were oversampled. In the Spring of 1990, NORC conducted in-person interviews of an average length of almost two hours each with 2,517 of the original 15,053 respondents. This codebook is for the follow-up in-person interviews.

This release does not include a number of appendices on the sample, the overall structure of the questionnaire, the methods for coding some of the variables, and on other topics. In the interests of making these data available in a timely fashion, we have provided this preliminary version.

In addition, the codebook and other materials on the screener data are still in preparation as of August 28, 1995 although we hope to release them soon.

Please note the following:

Weights for the Analysis---The frequencies that follow are from the unweighted data, but the designers of this survey recommend using weights under most circumstances. A nationally representative sample equal in size to the number of interviews conducted can be obtained by using the variable "WT2517". A justification for using this weight can be found in Appendix A of Sidney Verba, Kay Lehman Schlozman, and Henry E. Brady, Voice and Equality: Civic Voluntarism in American Politics, Harvard University Press, 1995.

Known Errors---The original data-set included 2,518 interviews. Eventually it was decided that one of these should be discarded for a number of reasons. Some of the following frequencies, however, include this extra ase.

Linking the Screener and Follo-Up Data---The variable "NOTSAME" should be used when doing analysis using variables from this data-set together with variables from the screener data-set. See the remarks under NOTSAME for a description of the problem.

The Questionnaire---This codebook does not contain all of the information contained in the questionnaire. The questionnaire should be considered part of the codebook, and it should be used in conjunction with these data. In particular, the questionnaire provides important information about the logic used in asking questions. A copy of the questionnaire can be obtained from UC DATA, 2538 Channing Way #5100, Berkeley, California 94720-5100 by sending a check for \$5.00 (made out to "Regents, University of California") and by asking for the "Citizen Participation Questionnaire."

LIST OF VARIABLES ON THE AMERICAN CITIZEN PARTICIPATION FILE

The following is a listing of all of the variables on the follow-up survey for the American Citizen Participation Study. The headings refer to parts of the questionnaire. Each variable is identified by its SPSS variable name, a number indicating its ordinal position in the file, and its SPSS label. The page numbers refer to the hard copy of the questionnaire.

Remarks: A respondent who indicated working or contributing to the same candidate was not asked the follow-up questions on campaign giving (starting with MCOFF) because it seemed redundant. (If the candidate was the same person, he or she was obviously of the same sex, race, party, etc.) For this group of respondents, the values for MCOFF and for MCPARTY, MCSEX, MCRACE, and MCLIBCON have been imputed from their values on the corresponding campaign-work variables (CWOFF, CWPARTY, CWSEX, CWRACE, and CWLIBCON.) This imputation has not been done for other variables such as issue concerns, reasons, and the outcome of the respondent's political acts because these answers might be different for campaign work and campaign contributions. For example, a respondent might have different reasons for contributing to a candidate than he or she had for working for that same candidate so there is no imputation of reasons.

19.3 Aside from membership on a board or council or attendance at meetings, I'd like to ask also about informal activity in your community or neighborhood. In the past twelve months, have you gotten together informally with or worked with others in your community or neighborhood to try to deal with some community issue or problem? (If you have mentioned this activity elsewhere, perhaps in connection with your church or synagogue, or an organization or a

local campaign, don't repeat it here.)

24.13A VOCAB1 Now we would like to know something about how people go about guessing words they do not know. On this card are listed some words -- you may know some of them, and you may not know quite a few of them. On each line the first word is in capital letters--like BEAST, you would say "4" since animal comes closer to BEAST than any of the other words. If you wish, I will read the words to you. These words are difficult for almost everyone -- just give me your best guess if you are not sure of the answer. The meaning of the first vocabulary word.

Remarks:

The variables listed below do not correspond directly to questions from the survey instrument.

The variables OGENVIR to OGCHOICE and OGMMEM to OGMCHAR were created from the raw data to categorize some of the organizations with which the respondent was involved. This involved matching information from two or more sets of questions. For example, a respondent's value for OGACTCAT was determined by taking his or her answer to, "In which of the organizations that you belong to or give time to are you the most active?" and looking to see what type of organization the respondent had classified that organization as earlier.

The variables OGMCAT and OGMMEM to OGMCHAR refer to a respondent's "main organization." The respondent's main organization was determined as follows. After having been asked about all the types of organizations, the respondent was asked the following 2 questions (18.1 and 18.2): "In which of the organizations that you belong to or give time to are you the most active" and "In the past twelve months, to which of the organizations we have just discussed have you contributed the most money -- beyond ordinary dues?" S/he was then asked, (18.3), "Which of these two organizations (READ NAMES FROM Qs. 1 AND 2) is most important to you?" This "most important" organization is considered the respondent's "main" organization.

The variables CLIDNO to CLUNDER contain additional information about the college that the respondent said that s/he had attended, if any. This information was obtained by matching the college name with NES codes or with information from Peterson's Guide to Four Year Colleges (Princeton, NJ: Peterson's Guides).
